

ssh ubuntu@yourdomain.com

(use this command to log into your OVH server)

a2pkDdeSCKXe

(your password, shhh!)

wget https://github.com/ant-media/Ant-Media-Server/releases/download/ams-v2.4.0.2/ant-media-server-community-2.4.0.2-20210905_1340.zip

(See the following for the latest version and change the link above: : <https://github.com/ant-media/Ant-Media-Server/releases>)

wget https://raw.githubusercontent.com/ant-media/Scripts/master/install_ant-media-server.sh && chmod 755 install_ant-media-server.sh

(get the installer script)

sudo ./install_ant-media-server.sh -i ant-media-server-community-2.4.0.2-20210905_1340.zip

(install ant media, make sure the .zip file above matches the one you downloaded!)

cd /usr/local/antmedia

(changing directory)

sudo ./enable_ssl.sh -d yourdomain.com

(install certificates, make sure to type your domain name!)

sudo iptables -t nat -A PREROUTING -p tcp --dport 80 -j REDIRECT --to-port 5080

sudo iptables -t nat -A PREROUTING -p tcp --dport 443 -j REDIRECT --to-port 5443

(forward ports)

sudo apt-get install iptables-persistent

(make port forwarding persistent on reboot)

sudo certbot renew

(log in and run this command to renew your SSL certificate)
